

Missing Message

Select a message/signal in the .cdd file that you can find attached (to open the cdd file, you have to download and install **CandelaStudio** using the link below) and simulate the *missing message fault* using CANalyzer.

Describe all the steps needed, in terms of driving cycle (**Canalyzer**) and fault status (**Dianalyzer**) to describe the evolution of the status byte. Take screenshots to describe the behaviour seen and comment the reasons for each change in the status byte.
