

Exercise 2 – CANalyzer [English version]

Using the file included in the “Acquisizione_BOA.7z”, using CANalyzer tool, reply to the following points:

1. Create a graph showing only engine rpm;
2. Create a graph including only the most important signals, describing different dynamic vehicle conditions; Choose only the signals which are useful to understand the status of the vehicle, what the driver was doing, general useful information;
3. Analysing the data, try to find out what is a potential issue in the manoeuvre recorded in the log;
4. Write a report which explains the activity done, describing also the issue in point 3;
