

FLA

First Level Analysis

FLA TEAM

- First Level Analysis is a group of engineers which primary task is to analyze & diagnose the vehicles under test.
- Vehicles may face “non-normal behavior” when tested in different physical conditions (roads, weather, features, etc.), so test analysis & troubleshooting need to be provided.
- The vehicles could be in prototype construction phase, final production form process, mileage accumulation during reliability, quality and after sale process.

Diagnose

Deliver

What we do?

The First Level Analysis team's mission is to analyze and diagnose all the vehicle issues reported by test engineers in order to define/address to a possible root cause and lead to a correct solution path for the 2nd Level Analysis Team.

FLA Team Workflow

PVM Meeting

The Project Validation Manager (PVM) organizes a daily meeting with all FLA team members to discuss over the daily issues about their occurrences, diagnostic obstacles and how to monitor them.

FLA - Assignment

All the tasks are divided between FLA team members in order to start with FLA analysis according to priority indicated at PVM meeting.

Issue Priority

The validation manager determines the work order priority and issue severance (what should be analyzed first).

Test Issue

All the vehicle issues (such as driving tests, charging tests, stress tests, or any other type of test) are reported by the test engineer (the person who executed the test) to the Program Validation Manager (PVM) and FLA team by mail.

The FLA meeting is first attended daily before the analysis can start

Test Issue Resources

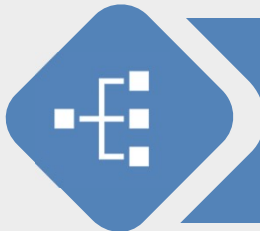

Plant Team

Plant engineers focus on product, identify and solve problems related to production processes and equipment.

Fleet Team

They assess customer needs, perform all the vehicle functions as a new customer should do, identify and record issues, provide data.

After Sales Team

“Customer-Oriented” Fleet assisting customer with tech support concerns and challenges, and also recommended solution to address needs they may have.

Flying doctors

Vehicle test & diagnose at customer location. They assist on person for customer vehicle problems categorized with high severity of issue

All the test data records are received by email (attached files or iCloud indication)

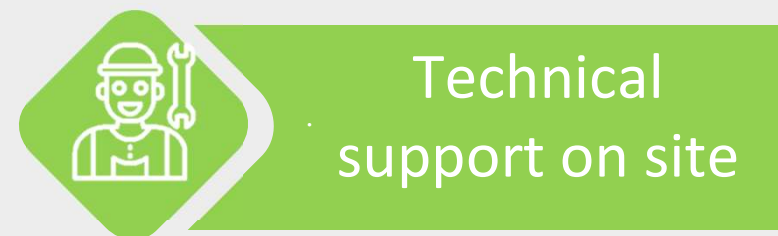

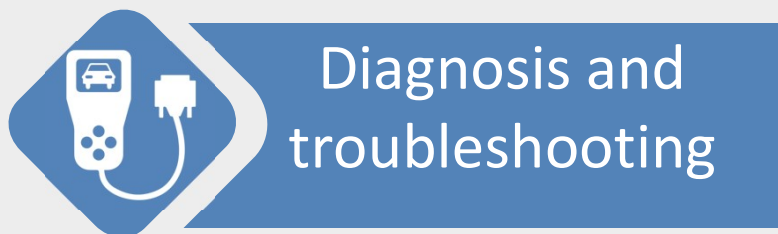

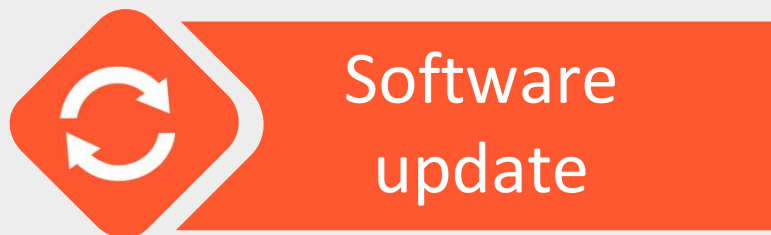

FLA Work Product

FTT for anomalies with higher severity and new occurrences refers to the corresponding one.

Flying doctor

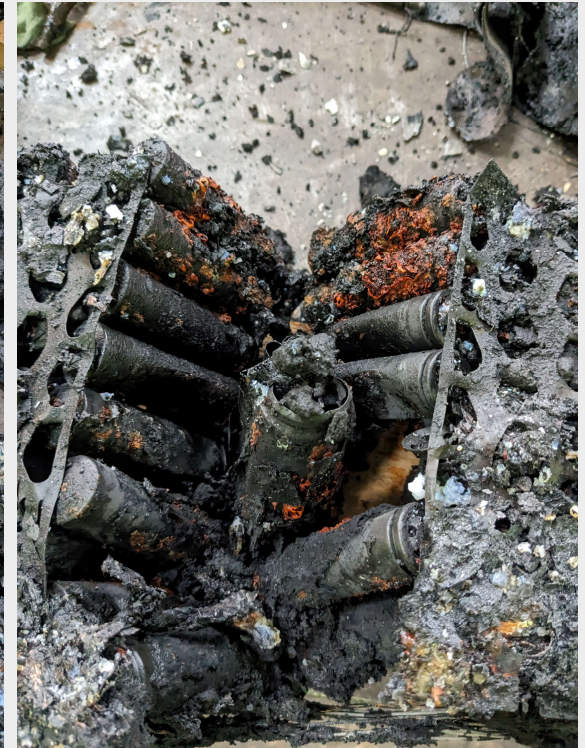

Technical support on Fiat Ducato BEV

- Investigation was conducted concerning the fire incident involving the Fiat Ducato BEV
- Solar EDGE resources disassembled the battery.
- Fire source was a compromised battery cell within battery number 1 of the vehicle.

Antwerp, Belgium

k Technical assistance

- Assistance on Alfa Romeo campaign sets.

 Region of Puglia, Italy

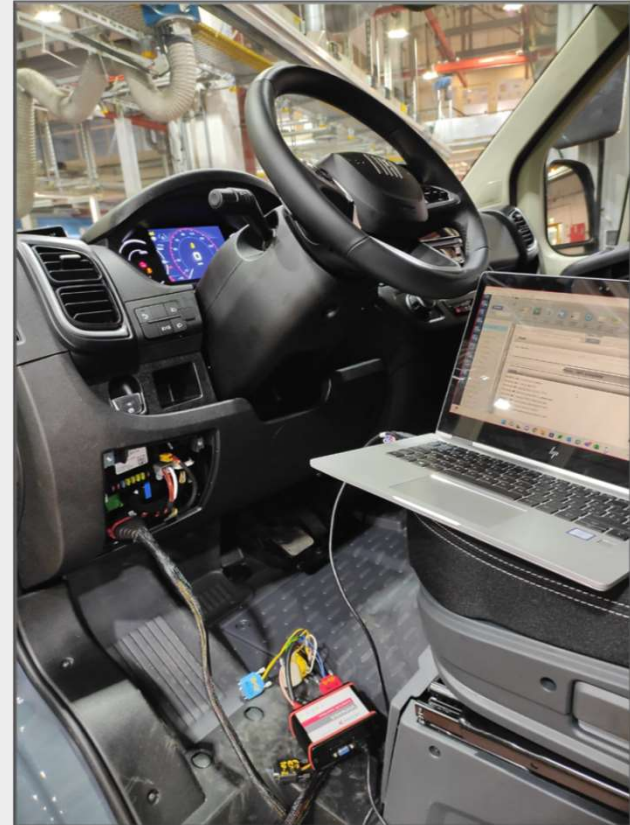

Technical assistance on site.

k Software update

- 13 cars software update
- X-250 BEV Project

 Russelsheim, Germany

Software update.

FLA / Flying Doctor Suggestions - To Be Discussed

- Test performing into vehicle (DVP test, reappear test, Insulation test, on-road test, charging, costumer maneuver test etc.)
- Assisting & following each fleet activity (hot test, winter test, interoperability test).
- Assisting on flying doctor activity (ECU flash, MT, VSR, troubleshooting, etc.)

THANK YOU !
